

COMPUTERIZED METHOD FOR DETERMINING A  
CREDIT LINE

ABSTRACT OF THE DISCLOSURE

A computerized method for determining a credit line to be issued by a financial service provider to an applicant business entity is provided. The method allows for collection of financial data for the applicant entity. The method further allows for processing the collected financial data to determine a base amount for the credit line. The base credit line is then adjusted based on the output from an evidential reasoning tool to determine the credit line to be issued to the applicant entity.
